Preface ..... **vii**

Acknowledgements ..... **xi**

1. Legends of Unusual Phenomena Before Earthquakes — Wisdom or Superstition? **1**

1.1 Introduction 2
1.2 Precursor phenomena in the sky, the atmosphere and on land 3
1.2.1 Earthquake light (EQL)
1.2.2 Earthquake clouds (EQCs) and fogs (EQFs)
1.2.3 Sky, sun, moon, stars and rainbows
1.2.4 Weather, water and sounds
1.3 Unusual behavior of animals and plants 9
1.3.1 Unusual animal behavior: myths or reality?
Insert Living God: the story of a tsunami
1.3.2 Legends and proverbs about animals before earthquakes
1.3.3 Unusually active catfish and the absence of eels
1.3.4 Color woodblock-prints of catfish: Namazu-e
1.3.5 Do human beings feel anything before earthquakes?
1.3.6 Early flowering, re-flowering and sensitive plants (Mimosa)
1.4 Unusual behavior of inanimate objects 15
1.4.1 Mysterious candle flame
1.4.2 Nails dropping from a magnet and compass: A magnetic anomaly?
1.4.3 Electric home appliances
1.4.4 Modern legends: Telecommunication lines and apparatus
1.5 Earthquake precursors and the Oriental worldview 16
1.5.1 Different ways of thinking in East and West
1.5.2 Examining the Oriental approach
1.6 Summary 19

2. Precursors Before Recent Earthquakes — Kobe, Izmit, Taiwan and India **20**

2.1 Introduction 21
2.2 What happened before the Kobe Earthquake? 22
2.2.1 Over 2000 statements on earthquake precursors
2.2.2 Phenomena in the sky and atmosphere
2.2.3 Unusual animal and plant behavior
2.2.4 Unusual behavior of electric appliances—the “Alice in Wonderland” Syndrome?

2.3 Unusual phenomena before the Izmit Earthquake (M7.4) in Turkey ..28
2.3.1 The Izmit Earthquake in 1999 and field survey
2.3.2 Unusual atmosphere and sky
2.3.3 Unusual animal behavior
2.3.4 Unusual phenomena on land and sea
2.3.5 Malfunctioning electrical appliances
2.3.6 "The Moses Phenomenon"
2.4 Precursors of the Taiwan-921 Earthquake (M7.7) 35
2.4.1 The Taiwan-921 earthquake and field survey
2.4.2 Unusual atmosphere, water and land
2.4.3 Unusual behavior of animals, plants and electric appliances
2.5 The West Indian (Gujarat) Earthquake (M7.7) in 2001 37
2.5.1 Field survey and newspaper reports: EQL and sounds
2.5.2 Unusual behavior of animals and plants
2.6 International mail and overall comments 39
2.6.1 Pigeons, a parrot and cats in the USA: Loma Prieta and Northridge
2.6.2 Symptoms of a British former POW
2.6.3 Overall comments on reports of recent earthquakes: No cultural differences
2.7 Numerical Data: fish capture records 41
2.7.1 Old work on fishery records by Terada
2.7.2 Sea bream catches before the Kobe Earthquake
2.7.3 Fishery records at the Istanbul market
2.7.4 Comments on fish catch records
2.8 Space and time distribution of precursors 44
2.8.1 Are unusual phenomena just wishful thinking?
2.8.2 Spatial distribution of precursor phenomena
2.8.3 A speculative mechanism for temporal shift of unusual behavior from small to large animals
2.8.4 Times of precursor phenomena before earthquakes
2.9 Summary 48

3. Earth Sciences and Electromagnetism 51

3.1 Introduction 52
3.2 Solid Earth Sciences and earthquakes 52
3.2.1 Structure of the Earth and the cause of earthquakes
3.2.2 Seismic P- and S-waves: Early warning systems and animal sensitivity
3.2.3 Foreshocks, main shock and aftershocks
3.2.4 The dilatancy-fluid diffusion model: Do microfractures precede earthquakes?
3.2.5 Geophysical and geochemical changes before earthquakes
3.2.6 Tidal withdrawal, "sea-splitting" and tsunamis
3.3 Elementary electromagnetism 59
3.3.1 Physical quantities and units
3.3.2 Electromagnetic (EM) waves

3.3.3 Electromagnetic pulses and seismo EM signals (SEMS)
3.3.4 Skin depth of EM waves
3.3.5 Condenser and dielectric materials
3.3.6 Propagation of EM waves in the earth's crust and atmospheric waveguides
3.3.7 Piezoelectric polarization and piezo-compensating charges
3.3.8 Electrokinetics and other mechanisms of stress-electricity conversion
3.3.9 Frictional electricity: Van de Graaff electrostatic generator
3.3.10 Absorption ratio for a dielectric sphere
3.3.11 Electric field effects on animals
3.4 Summary 76

4. Unusual Animal Behavior: I What do they Detect? — Electric Field Effects 77

4.1 Introduction 78
4.2 What do animals detect?—what are their sensors? 78
4.2.1 Sounds (acoustic waves) and vibration (foreshocks)
4.2.2 Odor or outgassing before earthquakes
4.2.3 Infrared or far infrared light
4.2.4 Magnetic fields
4.2.5 Electric fields
4.2.6 Charged aerosols (The Serotonin Syndrome)
4.2.7 EM waves (< 10 kHz): electric pulse (> 0.1 ms)
4.3 Electric field experiments on aquatic animals 86
4.3.1 Experimental conditions
4.3.2 Catfish and eels: Which is more sensitive?
4.3.3 Freshwater aquatic animals: shrimps, crabs and alignment in Japanese minnows, guppies, and loaches
4.3.4 Saltwater fish: lobster, squid, octopus, flounder and sea bream
4.3.5 Reptiles: Turtles and frogs
4.4 Electric field experiments on land animals 90
4.4.1 Experimental conditions
4.4.2 Mammals
4.4.3 Birds: Puffed-up feathers, grooming, shrieking
4.4.4 Sensitive reptiles
4.4.5 Insects and worms
4.4.6 Body current estimation
4.5 Experiments at Kobe-Oji Zoo 102
4.5.1 Electric field effects on animals in the Kobe-Oji Zoo
4.5.2 Estimated electric field intensity before the Kobe earthquake
4.6 Izu-Atagawa Tropical & Alligator Garden 106
4.6.1 Crocodiles: Eyes as electric sensors
4.6.2 Turtles (eyes) and snakes (tongue)
4.7 Animal experiments in Turkey and Taiwan 107
4.7.1 Parrots at the Darica-Kocaeli Bosphorus Zoo
4.7.2 Earthworms at an elementary school in Kaoshung, Taiwan

4.8 Preseismic electric field intensity at epicenters 108
4.8.1 Electric pulse effects on aquatic animals: Galvani's frog muscle
4.8.2 Land animals may still respond to electric pulses
4.8.3 Are intense EM pulses observable before earthquakes?
4.9 Summary 111

5. Unusual Animal Behavior: II — Rock Compression and Increased Animal Activity 114

5.1 Introduction 115
5.2 Rock compression experiment 115
5.2.1 Analysis of blood plasma and brain hypothalamus fluid in rats
5.2.2 How did the animals behave?
5.3 Disturbed mice behavior before the Kobe Earthquake 123
5.4 An EM exposure experiment 126
5.5 Effects of EM pulses on chickens 126
5.6 Possible physiological pathways for EM waves 127
5.6.1 Electrosensory organs in aquatic animals
5.6.2 Are EM pulses detected through the heart?
5.6.3 Skeletal muscle with anisotropic resistivity
5.7 Is behavioral response consistent with detection of EM waves? 130
5.8 Waking before earthquakes: a human response to EM waves? 132
5.9 Possible action of melatonin (the sleep hormone)? 135
5.10 Connection between seismo-electromagnetic signals (SEMS) and animal behavior? 136
5.11 Summary 136

6. Unusual Plant Responses Before Earthquakes 138

6.1 Introduction 139
6.2 Possible causes of plant anomalies before earthquakes 139
6.2.1 Changes in the plant's environment
6.2.2 Changes in plant physiology: direct effects
6.3 Investigation of electric field effects on plants and soils 141
6.3.1 Drying of soil through intense ground charges
6.3.2 Visible and near-infrared images from a satellite
6.3.3 Unusual mimosa movements
6.3.4 Other plant movement: "dancing" plants
6.4 Silk trees in earthquake prediction 145
6.5 Effect of EM waves on the growth of rice plants 147
6.5.1 Unusually short rice plants before earthquakes
6.5.2 "Bar code" in rice leaves
6.5.3 Discharges from the tip: Burning of plants at fault zone
6.6 Early flowering and re-blooming 153
6.6.1 Early flowering
6.6.2 A new horticultural technology?
6.7 Summary 154

7. Atmospheric Precursors
— Earthquake Light, Clouds, Sun, Moon, Stars and Rainbows 155
7.1 Introduction 156
7.2 Earthquake light (EQL) 156
7.2.1 EQL and the Kobe, Izmit and Shizuoka earthquakes
7.3 Sources and causes of EQL 159
7.3.1 Rock materials
7.3.2 Aerosol, liquid and gaseous processes for EQL
7.3.3 Atmospheric light and mechanisms for EQL
7.4 Theory of a dark discharge model 164
7.4.1 An electromagnetic (EM) model of a fault
7.4.2 A dark discharge model for EQL
7.4.3 Lessons from ball lightning
7.5 Earthquake Fogs and Clouds (EQFs and EQCs) 170
7.5.1 What are EQFs and EQCs?
7.5.2 Shapes of EQCs
7.5.3 Formation mechanisms of EQFs and EQCs
7.5.4 Experiments to generate EQFs and EQCs by electric fields
7.5.5 Can electric fields produce tornado clouds?
Insert Dissipating tornadoes by induced lightning?
7.6 Unusual phenomena in the sky 179
7.6.1 Sun, moon and stars
7.6.2 When and where before the Kobe earthquake?
7.6.3 Prediction of the longitude of earthquakes from red aurora?
7.7 Summary 182

8. Precursor Phenomena
— On Land, Sea and Elsewhere 184
8.1 Introduction 185
8.2 Air bubble movement—from land-tilting or electric charge? 185
8.2.1 Movements of air bubble in a level before an earthquake
8.2.2 Could it have been an EM phenomenon instead?
Insert Pendulum swing anomalies—an electric field effect?
8.3 Sounds from the ground: Can one hear EM waves? 188
8.3.1 Records of strange sounds and sounds from the ground
8.3.2 Sound and converse-piezoelectricity
8.3.3 Can animals directly hear EM pulses as sounds?
8.3.4 Explosive sounds before earthquakes: local rock fracture
8.4 Phenomena in the aquasphere 191
8.4.1 Turbid water in wells and bottles
8.4.2 A split sea in the Gulf of Izmit: “The Moses Phenomenon”
8.4.3 Hypothesis: Water movement into faults and areas of subsidence
8.4.4 Tidal withdrawal
8.5 Bent candle flame, smoke and color of steamed rice 195
8.5.1 Candle-flame phenomena: Bent or extinguished flames

8.5.2 Unusual color of steamed rice: Confectioner in Tokyo
8.5.3 Serpentine smoke from incense and chimneys
8.6 Thermometer: the contact angle of mercury 198
8.6.1 Thermometer with a rapidly falling mercury level
8.6.2 Control of contact angle by electric field: Unusual surface phenomenon?
8.7 Summary 200

9. Mysteries Before Earthquakes: — The Behavior of Electric Appliances 201

9.1 Introduction 202
9.2 Magnetic earthquake precursors? 202
9.2.1 Nails falling from a magnet, not a magnetic anomaly!
9.2.2 Disturbed orientation of a magnetic compass
9.2.3 Car navigator: Fluctuating direction arrow
9.2.4 Mischief by an invisible man?
9.3 Unusual behavior of electric home appliances 206
9.3.1 Faint glow of fluorescent lamp
9.3.2 Radio interference
9.3.3 "Barber-pole" color and speckle interference on TV screens
9.3.4 Strange sounds from refrigerators, spontaneous on-and-off switching of appliances
9.3.5 Activated mobile phones with no call records
9.3.6 Assorted unusual reports
9.4 Mysterious clocks and the "Alice in Wonderland" Syndrome 214
9.4.1 Did time stop or speed up?
9.4.2 Dead phosphors on a wristwatch
9.5 Earthquake forecasting using electric appliances? 217
9.6 Care needed to avoid interference in data measurements 218
9.7 Summary 219

10. Forecasting using animal monitoring 220

10.1 Introduction 221
10.2 Parakeets at a Chinese high school 221
10.3 The potential predictive value of mice 222
10.4 Can catfish be used in earthquake forecasting? 224
10.4.1 Observation for 16 years: Alleged success rate of 30 %?
10.4.2 Correlation between EM pulses (ULF) and catfish behavior
10.4.3 Aquarium with digital storage oscilloscope (DSO)
10.4.4 Simultaneous observation of catfish behavior and SEMS: A case for successful forecast of the Western Tottori Earthquake (M7.3, October 6, 2000)
10.4.5 Catfish in turmoil before the Geiyo earthquake (M 6.7, March 24, 2001)
10.5 Catfish monitoring network: integrated science education 229

10.6 From Parkfield cockroaches to animals fitted with meters 230
10.7 Forecasting using animals? 231
10.8 Summary 232

11. Monitoring Seismo-Electromagnetic Signals (SEMS) —a general survey 233

11.1 Introduction 234
11.2 Comments on changes in electric and magnetic fields 234
11.2.1 The proton magnetometer
11.2.2 Atmospheric electric field
11.2.3 DC geoelectric potential
11.2.4 The VAN method
11.3 Seismo-electromagnetic Signals 240
11.3.1 Precursory ULF before major earthquakes
11.3.2 SEMS observed before the Kobe Earthquake
11.3.3 Ionosphere and VLF anomalies (Kobe Earthquake)
11.3.4 Observation of SEMS by satellite
11.3.5 Recording preseismic EM pulses with a Pulse Height Analyzer
11.3.6 Real-time monitoring of SEMS
11.3.7 Earth-origin electric pulses and Earth crust waveguide
11.3.8 Electric field intensity differences between VAN and SEMS
11.3.9 Empirical scaling relations explained as EM waves
11.4 Summary 257

12. Summary 258

12.1 EM research is still young 258
12.2 Responses to specific objections 260
12.3 Is short-term earthquake prediction possible? 262
12.4 What would be the next steps in the research program? 262
12.5 Conclusion 263

Appendix 1 265

Questionnaire to scientists and citizens 265
Are earthquake precursors superstitions or real phenomena ?
Response
Analysis
Reasons for rejection and scepticism
Summary 267

Appendix 2 269

Disaster Prevention 269

Bibliography and Reading List 271

Index 283
